

# Results Based Monitoring and Evaluation

## AIM

This course is aimed at developing knowledge and skills in using existing routine data/information (i.e. DHIS data) in monitoring and evaluation to support evidence-based decision-making.

The workshop is grounded in the national priority for reducing maternal and child mortality to provide context and practical exercises.

## TARGET GROUPS

Line and program managers working in the public health care sector

Minimum of 15 and maximum of 25 participants per workshop

## OBJECTIVES

By the end of the 5 day course, participants should have improved levels of knowledge and skills in:

- Understanding the related Policies and Acts
- Using existing DHIS data/information to identify:
  - Poor data quality
  - Lessons that can be learned
  - Resources to reduce maternal and child mortality
- Understanding results-based monitoring and reporting

## COURSE CONTENTS

Participants will work on:

- Reviewing health Policies and Plans to identify key goals and targets
- Existing DHIS data/information for evidence-based decision making
- Existing DHIS data/information to strengthen the public health care system and health programs
- Results based monitoring and reporting
- Developing M&E plans

## PRE-REQUISITES

Computer literacy
